

*CLEAN CITIES*  
**Alternative Fuel**  
**Price Report**

## Welcome to the January 2016 issue!

The Clean Cities Alternative Fuel Price Report is a quarterly report designed to keep Clean Cities coalitions and other interested parties up to date on the prices of alternative and conventional fuels in the United States. This issue summarizes prices that were submitted between January 1, 2016 and January 15, 2016 by Clean Cities coordinators, fuel providers, and other Clean Cities stakeholders.

## What's New in This Issue?

The Surface Transportation and Veterans Health Care Choice Improvement Act of 2015 (H.R. 3236), was signed into law on July 31, 2015. Effective January 1, 2016, the law requires that federal excise taxes on liquefied natural gas (LNG) and liquefied petroleum gas (LPG or propane) motor fuels be calculated on an energy equivalent basis, relative to diesel and gasoline. To show consistent measurements throughout the Alternative Fuel Price Report, therefore, beginning with the January 2016 issue, in addition to showing retail, at-the-pump sales prices, we are including the following additional tables:

- Tables 16a and 16b compare prices for E85 and propane to gasoline on a gasoline gallon equivalent (GGE) basis.
- Tables 16c and 16d compare B20 and B99/B100 to diesel on a diesel gallon equivalent (DGE) basis.

Prices for compressed natural gas are already shown on a gasoline gallon equivalent (GGE) and diesel gallon equivalent (DGE) basis in Tables 5 and 6, respectively.

We will continue to include tables that show retail, at-the-pump sales prices for E85, propane, B20 and B99/B100 on a per gallon basis, in the sections for each of those fuels. (See Tables 7, 8, 9 and 10).

## Looking Ahead

We will continue to improve the Alternative Fuel Price Report, based on user feedback.

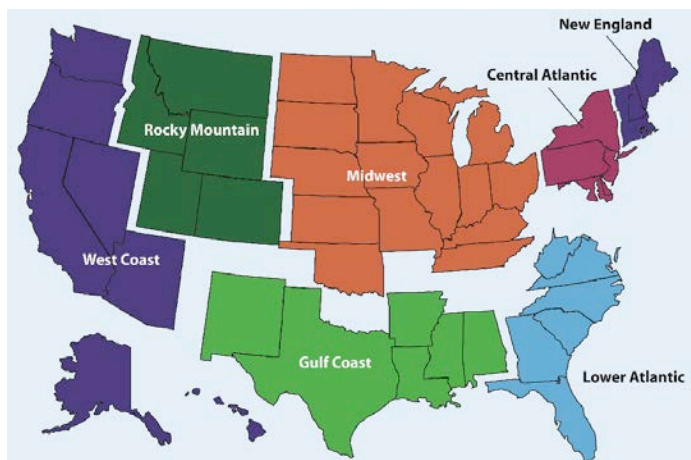

- In a future issue, as the number of liquefied natural gas (LNG) prices submitted continues to increase, we will include a section on LNG prices, relative to diesel.
- We continue to work on creating a system that will allow for additional, customizable, on-line reports.

We look forward to hearing from you as we implement these upgrades.

## Methodology

- This report’s prices represent retail, at-the-pump sales prices for each fuel, including federal and state motor fuel taxes.<sup>1</sup>
- Clean Cities coordinators, fuel providers, and other key stakeholders provide prices for fuels in their areas on a voluntary basis.
- Prices were submitted for all major alternative fuels currently in widespread use, i.e. natural gas, propane, biodiesel, and ethanol.
- Prices were submitted for conventional fuels from stations that also sell alternative fuels, or from nearby stations.
- Prices from public and private refueling stations are included.<sup>2</sup>
- Prices were averaged to determine regional price trends by fuel and variability in fuel price within and among regions.<sup>3</sup>
- Some states charge a flat annual fee, in lieu of collecting motor fuel taxes at the pump, usually for large trucks using gaseous fuels like compressed natural gas (CNG) and liquefied petroleum gas (LPG or propane). These flat fees are not included in the prices reported in these pages.

- Consistent with the U.S. Energy Information Administration (EIA) fuel price reporting format, prices are grouped by the Petroleum Administration for Defense Districts (PADD). The PADD districts are illustrated in the map below.

**FIGURE 1**  
**PETROLEUM ADMINISTRATION FOR DEFENSE DISTRICTS (PADD)**

Source: U.S. Energy Information Administration

TABLE 1 Number of Data Points Submitted							
Region	Gasoline	Diesel	CNG	Ethanol	Propane	B20	B99/B100
New England	40	33	28	5	25	11	4
Central Atlantic	87	88	93	97	50	32	2
Lower Atlantic	71	66	62	80	129	22	13
Midwest	234	128	117	226	78	21	0
Gulf Coast	87	71	59	127	126	7	2
Rocky Mountain	104	75	108	63	76	9	1
West Coast	122	138	130	78	125	34	28
<b>TOTAL</b>	<b>745</b>	<b>599</b>	<b>597</b>	<b>676</b>	<b>609</b>	<b>136</b>	<b>50</b>

<sup>1</sup> In some cases, prices were submitted by government refueling facilities, and motor fuel taxes were not included in the prices reported to Clean Cities. In these instances, the appropriate federal and state motor fuel taxes have been added to the reported prices to provide a more representative basis for comparison.

<sup>2</sup> Public refueling stations are open to the public, while private fueling stations are privately-owned or available only to selected fleets.

<sup>3</sup> Fuel price averages for this report are determined by simply averaging the individual data points received. A comparison of average fuel prices for private and for public stations by region can be found on pages 20-21.

## Summary of Current Report Information

Table 2 shows national average retail fuel prices for this report and the previous report. Changes in average retail prices from one quarter to another may be due to a number of factors, including an actual change in price, different sample sizes, the inclusion of different locations, and seasonal variations in demand.

Prices in this report were reported in the units in which they are typically sold, for example, dollars per gallon of gasoline or dollars per gasoline gallon equivalent (GGE) of CNG.

Consumer interest in alternative fuels generally increases when the alternative fuel price is less than the conventional fuel price on a per gallon basis, even if that differential does not directly translate to savings on an energy-equivalent basis.

Fuel Type <sup>4</sup>	October 2015	January 2016	Change in Price October-January	Units of Measurement
Gasoline (E10)	\$2.35	\$1.98	-\$0.37	per gallon
Diesel	\$2.59	\$2.23	-\$0.36	per gallon
CNG	\$2.09	\$2.09	\$0.00	per GGE
Ethanol (E85)	\$2.18	\$1.86	-\$0.32	per gallon
Propane**	\$2.90	\$2.85	-\$0.05	per gallon
Biodiesel (B20)	\$2.66	\$2.41	-\$0.25	per gallon
Biodiesel (B99/B100)	\$3.40	\$3.21	-\$0.19	per gallon

\*Includes public and private stations

\*\*Includes primary and secondary stations

Fuel Type	Per Gasoline Gallon Equivalent (\$/GGE)	Per Diesel Gallon Equivalent (\$/DGE)	Per Million British Thermal Units (\$/MBtu)
Gasoline (E10)	\$1.98	\$2.24	\$17.32
Diesel	\$1.99	\$2.23	\$17.33
CNG	\$2.09	\$2.36	\$18.29
Ethanol (E85)	\$2.42	\$2.73	\$27.63
Propane**	\$3.91	\$4.40	\$46.83
Biodiesel (B20)	\$2.17	\$2.46	\$17.17
Biodiesel (B99/B100)	\$3.15	\$3.53	\$26.90

\*Includes public and private stations

\*\*Includes primary and secondary stations

Liquid fuels have differing energy contents per gallon, so the price paid per unit of energy content can differ somewhat from the price paid per gallon. Table 3 shows fuel prices from Table 2 normalized to an energy-equivalent basis.

Note that, for the alternative fuels, prices on an energy-equivalent basis, ie, \$/GGE or \$/DGE, are generally higher than the prices per gallon, due to their lower energy content.<sup>5</sup>

Propane prices include information from both “primary” and “secondary” stations. Primary stations have dedicated vehicle services and tend to be less expensive than secondary stations, which mostly serve the propane tank and bottle market.

Prices for Table 3 were calculated using the nominal lower heating values in BTUs per gallon of fuel from the Oak Ridge National Laboratory’s Transportation Energy Data Book.<sup>6</sup>

<sup>4</sup> A very small sample (6 points) of hydrogen information was received, with an average price of \$13.93/GGE.

<sup>5</sup> For ethanol flexible-fuel vehicles (FFVs), the actual difference in fuel used per mile is somewhat less than would be calculated simply on the difference in energy content of the fuels. Some sources have noted that some FFVs can achieve better energy efficiency (miles per unit of energy) on E85 than on gasoline. This effect is not currently included in these calculations as the magnitude of the effect varies by specific FFV model.

<sup>6</sup> <http://cta.ornl.gov/data> A listing of the conversion factors used appears as an appendix at the end of this report.

## Gasoline and Diesel Prices: Clean Cities and EIA Data

Table 4, below, shows gasoline and diesel prices submitted by Clean Cities coordinators, fuel providers, and other stakeholders on a voluntary basis, between January 1 and January 15, 2016, compared to prices from the petroleum information section of the Energy Information Administration (EIA) website, for the week of January 4, 2016.

Clean Cities prices for conventional fuels were obtained from retail stations providing alternative fuel price information, or from nearby stations, so data collection was not uniform across the regions of the country; however, the information is representative of refueling stations selling both alternative fuels and conventional fuels.

The EIA data shows weekly average prices from a sample of approximately 800 retail gasoline and 400 retail diesel outlets across the country. The EIA data points are weighted to reflect the quantity of fuel being sold at that price.

The Clean Cities data is not weighted, and represents simple averages of reported prices. While there is some variation, the EIA average prices match relatively closely with the average prices reported by Clean Cities coordinators.

TABLE 4 Average Retail Gasoline and Diesel Prices by Region, in \$/gal from Clean Cities and EIA* Sources							
Region	GASOLINE PRICES				DIESEL PRICES		
	Clean Cities	EIA**	Difference***		Clean Cities	EIA**	Difference***
New England	\$2.12	\$2.04	\$0.08		\$2.50	\$2.34	\$0.16
Central Atlantic	\$2.01	\$2.07	-\$0.06		\$2.27	\$2.39	-\$0.12
Lower Atlantic	\$1.93	\$1.93	\$0.00		\$2.19	\$2.14	\$0.05
Midwest	\$1.83	\$1.86	-\$0.03		\$2.05	\$2.13	-\$0.08
Gulf Coast	\$1.66	\$1.75	-\$0.09		\$2.01	\$2.11	-\$0.10
Rocky Mountain	\$1.84	\$1.96	-\$0.12		\$2.05	\$2.19	-\$0.14
West Coast	\$2.60	\$2.66	-\$0.06		\$2.55	\$2.46	\$0.09
<b>NATIONAL AVERAGE</b>	<b>\$1.98</b>	<b>\$2.03</b>	<b>-\$0.05</b>		<b>\$2.23</b>	<b>\$2.21</b>	<b>\$0.02</b>

\*EIA = Energy Information Administration

\*\*EIA prices are from the petroleum information section of the EIA website, week of January 4, 2016.

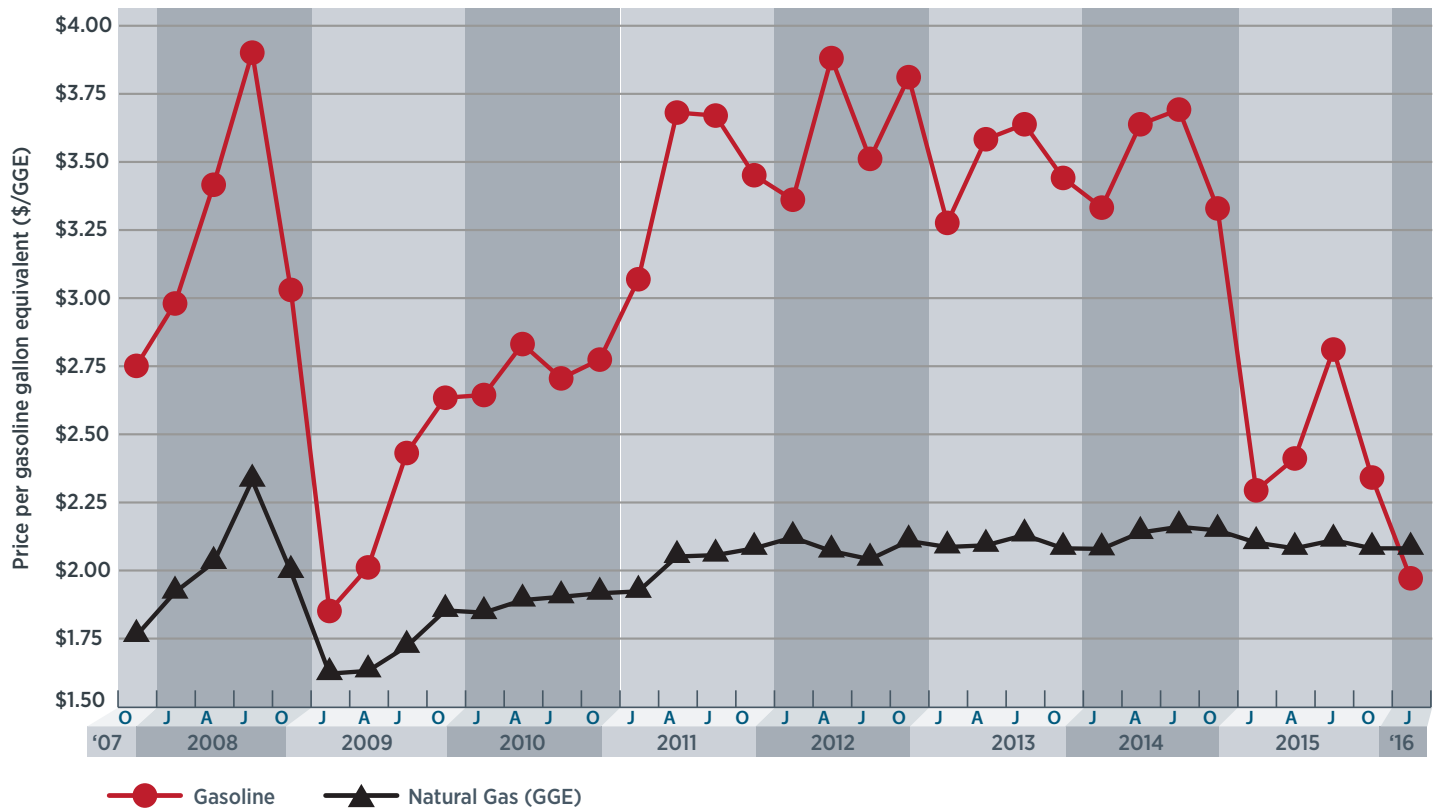

[http://www.eia.gov/dnav/pet/xls/PET\\_PRI\\_GND\\_A\\_EPMR\\_PTE\\_DPGAL\\_W.xls](http://www.eia.gov/dnav/pet/xls/PET_PRI_GND_A_EPMR_PTE_DPGAL_W.xls)

\*\*\*Negative numbers represent average Clean Cities prices that are lower than EIA prices.

# Compressed Natural Gas (CNG), cont.

**FIGURE 3**  
**HISTORICAL COMPRESSED NATURAL GAS (CNG) PRICES VERSUS GASOLINE**

## Compressed Natural Gas (Relative to Diesel)<sup>7</sup>

Region	CNG Prices (\$/DGE*)	Diesel Prices (\$/gal)	Price Difference**
New England	\$2.77	\$2.50	\$0.27
Central Atlantic	\$2.23	\$2.27	-\$0.04
Lower Atlantic	\$2.33	\$2.19	\$0.14
Midwest	\$2.21	\$2.05	\$0.16
Gulf Coast	\$2.29	\$2.01	\$0.28
Rocky Mountain	\$2.16	\$2.05	\$0.11
West Coast	\$2.71	\$2.55	\$0.16
<b>NATIONAL AVERAGE</b>	<b>\$2.36</b>	<b>\$2.23</b>	<b>\$0.13</b>

\*DGE = diesel gallon equivalent

\*\* Negative numbers represent average CNG prices that are lower than diesel, on a \$/DGE basis.

Table 6 shows the prices from Table 5, converted to \$/diesel gallon equivalent (\$/DGE), for easy comparison with diesel prices.

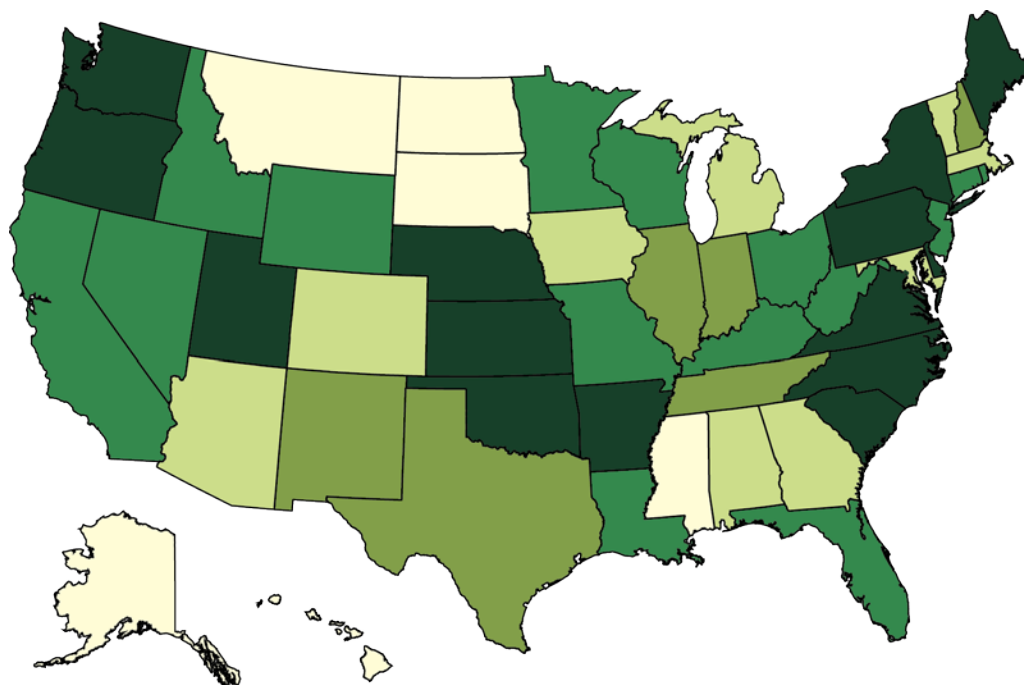

As with other fuels, the energy content of natural gas can vary. CNG dispensers are calibrated for local gas compositions and dispense an accurate GGE for the actual gas being sold.

On average, during this reporting period, CNG cost about \$0.13 more than diesel on a per diesel gallon equivalent basis.

**Note:** The Alternative Fuel Price Report is a snapshot in time of *retail* fuel prices. Alternative fuel fleets can obtain significantly lower fuel prices than those reported in the AFPR by entering into contracts directly with local fuel suppliers. Contract prices will vary, depending on fleet size and amount of fuel to be purchased, distance from the supplier, region of the country and other factors.

The prices shown in Table 6 were submitted by Clean Cities coordinators, fuel providers, and other stakeholders on a voluntary basis, between January 1 and January 15, 2016.

In this map, negative numbers represent prices for CNG that are lower than diesel, on a per diesel gallon equivalent basis. States not highlighted with a color did not have any CNG data points in the current report.

### CNG Price Difference Relative to Diesel

**FIGURE 4  
PRICE DIFFERENTIALS BY STATE FOR COMPRESSED NATURAL GAS (CNG)  
RELATIVE TO DIESEL**

<sup>7</sup> A total of 43 liquefied natural gas (LNG) prices were submitted, with an average fuel price of \$2.45/DGE. Because of the small number of price points, this data is not reflected in the report.

# Compressed Natural Gas (CNG), cont.

**FIGURE 5**  
**HISTORICAL COMPRESSED NATURAL GAS (CNG) PRICES VERSUS DIESEL**

# Ethanol (E85)

**TABLE 7  
ETHANOL (E85) AND GASOLINE AVERAGE RETAIL PRICES BY REGION**

Region	E85 Prices (\$/gal)	Gasoline Prices (\$/gal)	Price Difference*
New England	\$2.51	\$2.12	\$0.39
Central Atlantic	\$2.12	\$2.01	\$0.11
Lower Atlantic	\$1.92	\$1.93	-\$0.01
Midwest	\$1.69	\$1.83	-\$0.14
Gulf Coast	\$1.59	\$1.66	-\$0.07
Rocky Mountain	\$1.87	\$1.84	\$0.03
West Coast	\$2.37	\$2.60	-\$0.23
<b>NATIONAL AVERAGE</b>	<b>\$1.86</b>	<b>\$1.98</b>	<b>-\$0.12</b>

\*Negative numbers represent average E85 prices that are lower than gasoline, on a \$/gal basis.

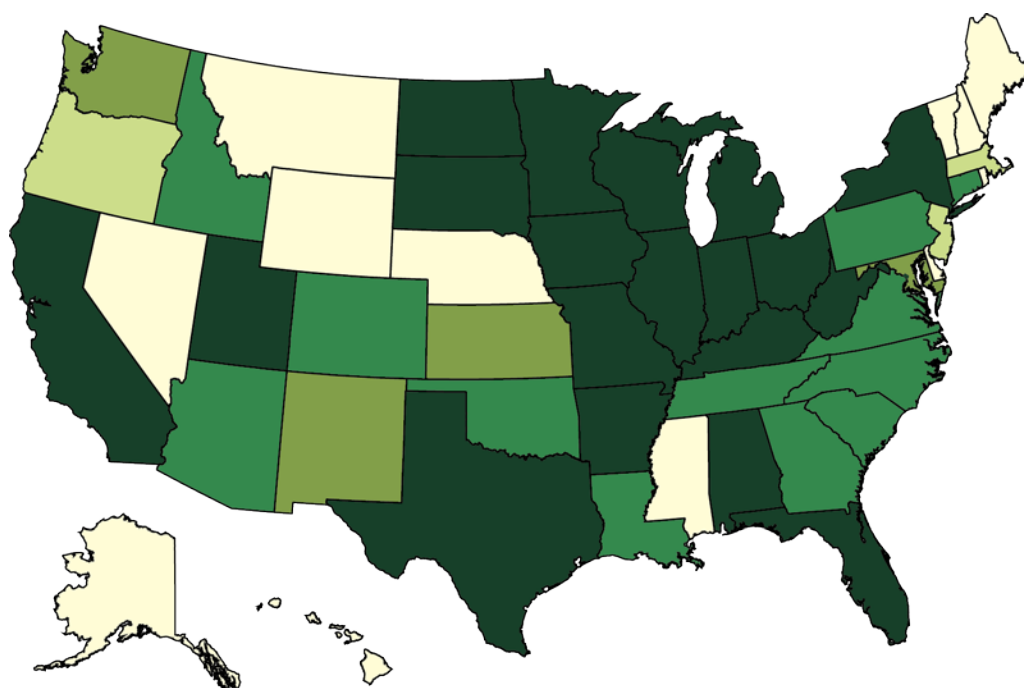

The prices shown in Table 7 were submitted by Clean Cities coordinators, fuel providers, and other stakeholders on a voluntary basis, between January 1 and January 15, 2016.

Most gasoline available throughout the United States today is a blend of 90% gasoline and up to 10% ethanol, or E10. Additionally, the E85 that is sold in the United States today actually contains, on average, approximately 70% ethanol.

E85 energy content for this report is therefore calculated as (.70)(E100 energy content) + (.30)(E0 energy content), to more closely reflect the actual energy content of E85 fuel available today.

On average, during this reporting period, E85 cost about \$0.12 less than gasoline on a per gallon basis.

In this map, negative numbers represent prices for E85 that are lower than gasoline, on a per gallon basis. States not highlighted with a color did not have any E85 data points in the current report.

### E85 Price Difference Relative to Gasoline

- \$0.41 to \$0.00
- \$0.01 to \$0.25
- \$0.26 to \$0.50
- \$0.51 to \$1.06
- Insufficient Data

# Biodiesel Blends: B20

Region	B20 Prices (\$/gal)	Diesel Prices (\$/gal)	Price Difference*
New England	\$2.49	\$2.50	-\$0.01
Central Atlantic	\$2.33	\$2.27	\$0.06
Lower Atlantic	\$2.28	\$2.19	\$0.09
Midwest	\$2.30	\$2.05	\$0.25
Gulf Coast	\$2.10	\$2.01	\$0.09
Rocky Mountain	\$2.21	\$2.05	\$0.16
West Coast	\$2.74	\$2.55	\$0.19
<b>NATIONAL AVERAGE</b>	<b>\$2.41</b>	<b>\$2.23</b>	<b>\$0.18</b>

\*Negative numbers represent average B20 prices that are lower than diesel, on a \$/GAL basis.

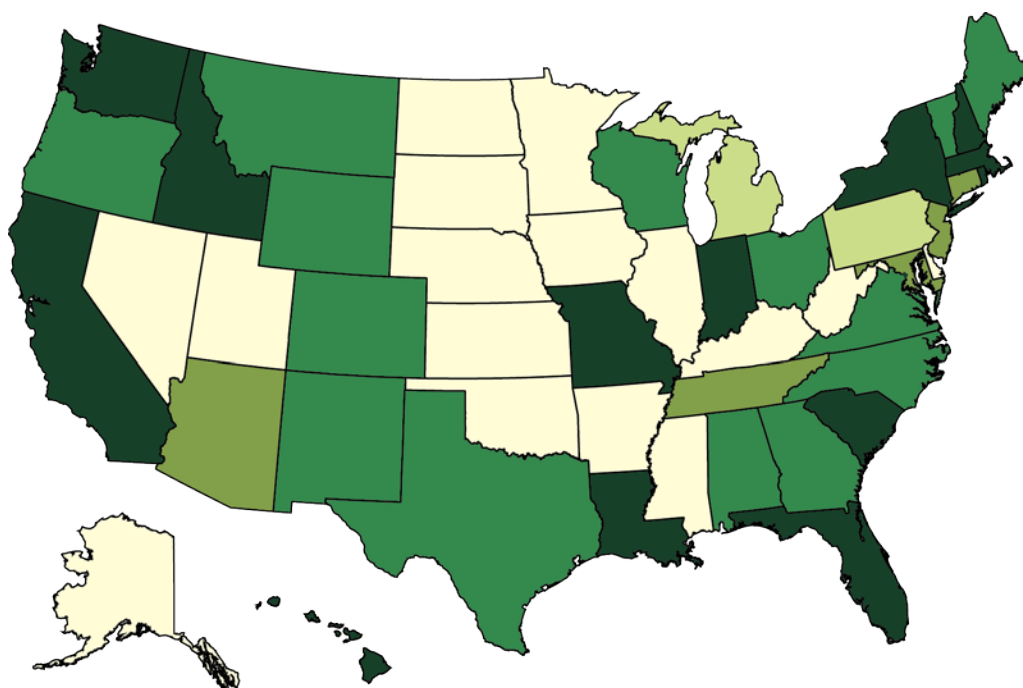

The prices shown in Table 9 were submitted by Clean Cities coordinators, fuel providers, and other stakeholders on a voluntary basis, between January 1 and January 15, 2016.

B20 is a blend of 20% biodiesel and 80% conventional diesel. B20 contains only about 2% less energy (BTUs) per volume than 100% diesel. The appendix at the end of this report provides conversion factors for calculating B20 prices on a GGE and DGE basis.

Note that B20 prices, in many regions, track very closely with diesel prices.

On a national average basis, during this reporting period, B20 cost about \$0.18 more than diesel on a per gallon basis.

In this map, negative numbers represent prices for B20 that are lower than diesel, on a per gallon basis. States not highlighted with a color did not have any B20 data points in the current report.

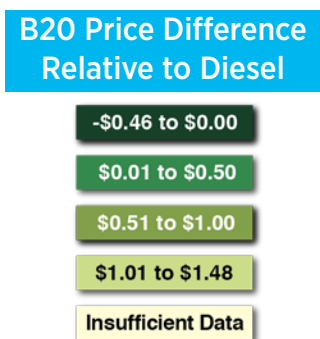

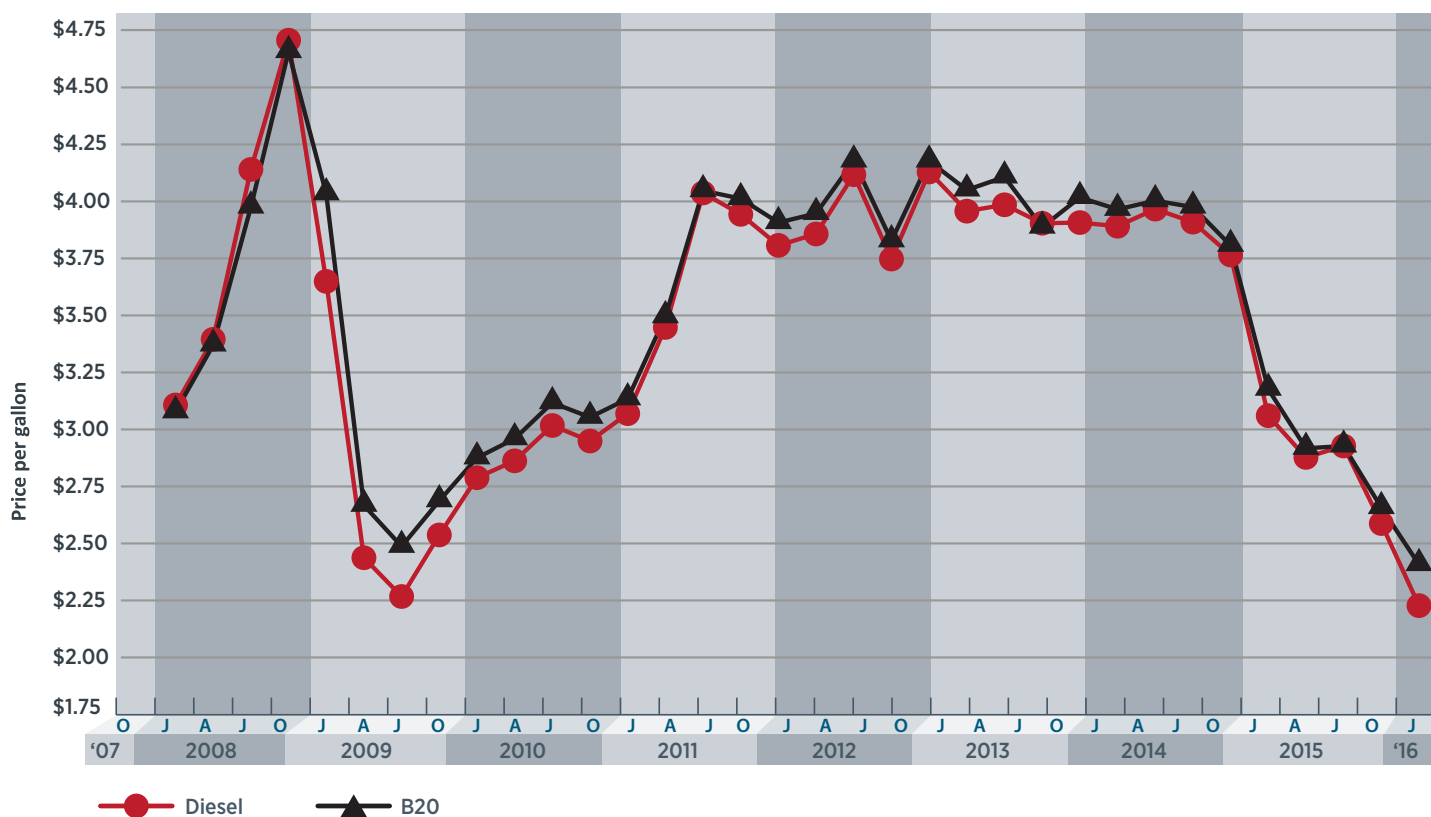

FIGURE 10  
PRICE DIFFERENTIALS BY STATE FOR B20 RELATIVE TO DIESEL

## Biodiesel Blends: B20, cont.

**FIGURE 11**  
**HISTORICAL B20 PRICES VERSUS DIESEL**

# Biodiesel Blends: B99/B100

Region	B99/B100 Prices (\$/gal)	Diesel Prices (\$/gal)	Price Difference*
New England	2.35	2.50	-0.15
Central Atlantic	4.30	2.27	2.03
Lower Atlantic	3.12	2.19	0.93
Midwest	---	2.05	---
Gulf Coast	2.28	2.01	0.27
Rocky Mountain	2.40	2.05	0.35
West Coast	3.39	2.55	0.84
<b>NATIONAL AVERAGE</b>	<b>3.21</b>	<b>2.23</b>	<b>0.98</b>

\*Negative numbers represent average B99/B100 prices that are lower than diesel, on a \$/GAL basis.

The prices shown in Table 10 were submitted by Clean Cities coordinators, fuel providers, and other stakeholders on a voluntary basis, between January 1 and January 15, 2016.

B100 contains about 10% less energy (BTUs) per volume than 100% diesel.

The appendix at the end of this report provides conversion factors for calculating B100 prices on a GGE and DGE basis.

On average, during this reporting period, B99/B100 cost about \$0.98 more than diesel on a per gallon basis.

In this map, negative numbers represent prices for B99/B100 that are lower than diesel, on a per gallon basis. States not highlighted with a color did not have any B99/B100 data points in the current report.

## Comparison Of Prices: This Report Versus Last Report

The following tables summarize the average retail prices submitted for this report by region, and compare them to prices submitted for the October 2015 Alternative Fuel Price Report. It should be noted that a portion of the price changes may be attributed to differing sample sizes and locations between the two reports.

### GASOLINE (\$ per gallon)

TABLE 11 a				
Region	Price for October 2015	Price for January 2016	Difference in \$	Difference in %

## Price Comparison By Region For Public & Private Refueling Stations

The tables below summarize average retail fuel prices contained in this report, sorted by type of refueling station, i.e., “private” or “public”. The stations classified as “public” are open to the general public. The majority of the stations classified as “private” are operated by state or local government agencies, transit agencies, utility districts, colleges or universities, or military facilities. They serve the host agency’s fleets, and may have contractual or other arrangements in place to sell fuel to other government agencies and/or selected other fleets. In some cases, contracts may include billing, accounting, or fleet service management fees that are rolled into the price of the fuel.

For this report, there were 3,101 prices submitted from “public” refueling stations, and 360 prices submitted from “private” refueling stations, for a total of 3,461 prices.

As with the other prices in this report, these prices include state and federal taxes, as described in the Methodology section of this document.

Region	PRIVATE	PUBLIC
New England	\$2.13	\$2.12
Central Atlantic	\$1.99	\$2.01
Lower Atlantic	\$2.00	\$1.93
Midwest	\$2.21	\$1.81
Gulf Coast	---	\$1.66

## Historical Alternative Fuel Prices From Previous Reports

The following graphs illustrate historical prices for the alternative fuels included in the Alternative Fuel Price Report from 2007 to the present, relative to gasoline and diesel. Compressed natural gas (in GGE), propane, and ethanol (E85) have been graphed against gasoline prices, while compressed natural gas (in DGE) and biodiesel blends (B20 and B99/B100) have been graphed against diesel prices.

**FIGURE 14**  
ALTERNATIVE FUEL PRICES VERSUS GASOLINE

**FIGURE 15**  
ALTERNATIVE FUEL PRICES VERSUS DIESEL

## Illustration of Conversion Factors for Fuels

Fuel	Lower Heating Value
Gasoline (E0)	115,400 BTU/gal
Gasoline (E10) <sup>10</sup>	114,300 BTU/gal
Diesel	128,700 BTU/gal
Biodiesel (B100)	117,100 BTU/gal
Compressed Natural Gas (CNG) <sup>11</sup>	114,300 BTU/GGE
Ethanol (E100)	75,700 BTU/gal
Propane	83,500 BTU/gal

Conversion factors used to establish prices in dollars per gasoline gallon equivalent (\$/GGE) and dollars per diesel gallon equivalent (\$/DGE) were developed using the lower heating values from the Transportation Energy Data Book Edition 33,<sup>9</sup> and are listed to the left.

In the case of CNG, prices are provided to us in GGE, so no conversion is necessary. The representative heating value of CNG is provided in Table 13 as a reference.

### Conversion to GGE

The conversion factor used to convert the price of an alternative fuel from \$/gallon to \$/GGE is determined as follows:

$$\text{Conversion factor} = \frac{\text{BTU/gal of gasoline (E10)}}{\text{BTU/gal of alternative fuel}}$$

To calculate the price of an alternative fuel in \$/GGE, multiply the price per gallon of the alternative fuel by the relevant conversion factor from Table 14.

Fuel	Conversion Factor
Biodiesel (B20)	0.90
Biodiesel (B100)	0.98
CNG	1.00
Ethanol (E85) <sup>12</sup>	1.30
Propane	1.37

### Conversion to DGE

The conversion factor used to convert the price of an alternative fuel from \$/gallon to \$/DGE is determined as follows:

$$\text{Conversion factor} = \frac{\text{BTU/gal of diesel}}{\text{BTU/gal of alternative fuel}}$$

For example, the conversion factor used to convert a B100 price from \$/gal to \$/DGE is determined as follows:

$$\frac{128,700 \text{ BTU/gal of diesel}}{117,100 \text{ BTU/gal of B100}} = 1.099, \text{ rounded to } 1.10$$

To calculate the price of an alternative fuel in \$/DGE, multiply the price per gallon of the alternative fuel by the relevant conversion factor from Table 15.

For example, if the price of B100 is given as \$3.00/gal, the \$/DGE is determined as follows:

$$(\$3.00/\text{gal}) \times 1.10 = \$3.30/\text{DGE}$$

Fuel	Conversion Factor
Biodiesel (B20)	1.02
Biodiesel (B100)	1.10
CNG	1.13
Ethanol (E85) <sup>13</sup>	1.47
Propane	1.54

<sup>9</sup> <http://cta.ornl.gov/data>

<sup>10</sup> According to the National Renewable Energy Laboratory (NREL) Alternative Fuels Data Center, the energy content of common gasoline baseline references (E0, E10 and indolene) varies between 112,114 and 116,090 Btu/gal. We chose 114,300 Btu/gal for the E10 energy content, consistent with the Transportation Energy Data Book (TEDB) energy content of CNG, in GGEs. See next footnote.

<sup>11</sup> (5.66 lbs. of CNG/GGE) x (20,200 BTU/lb.) = 114,332; rounded to 114,300.

<sup>12</sup> Most gasoline available throughout the United States today is a blend of 90% gasoline and up to 10% ethanol, or E10. Additionally, the E85 that is sold in the United States today actually contains, on average, approximately 70% ethanol. E85 energy content for this report is therefore calculated as [(0.70) x (E100 energy content)] + [(0.30) x (E0 energy content)], to more closely reflect the actual energy content of E85 fuel available today.

<sup>13</sup> See footnote 12, above.

## Comparison of Prices on an Energy-Equivalent Basis

The following tables compare prices for E85, propane, B20 and B99/B100 to conventional fuels (gasoline and diesel) on an energy-equivalent basis. (Natural gas is generally sold in gasoline gallon equivalents or diesel gallon equivalents, so the natural gas “price at the pump” can be directly compared to the price of the corresponding conventional fuel, as shown in Tables 5 and 6.)

TABLE 16a ETHANOL (E85) AND GASOLINE AVERAGE RETAIL PRICES BY REGION (GGE)			
Region	E85 Prices (\$/GGE)	Gasoline Prices (\$/gal)	Price Difference*
New England	\$3.26	\$2.12	\$1.14
Central Atlantic	\$2.76	\$2.01	\$0.75
Lower Atlantic	\$2.50	\$1.93	\$0.57
Midwest	\$2.20	\$1.83	\$0.37
Gulf Coast	\$2.07	\$1.66	\$0.41
Rocky Mountain	\$2.43	\$1.84	\$0.59
West Coast	\$3.08	\$2.60	\$0.48
<b>NATIONAL AVERAGE</b>	<b>\$2.42</b>	<b>\$1.98</b>	<b>\$0.44</b>

\*Negative numbers represent average E85 prices that are lower than gasoline, on a \$/GGE basis.

TABLE 16b PROPANE (LPG) AND GASOLINE AVERAGE RETAIL PRICES BY REGION (GGE)			
Region	LPG Prices (\$/GGE)	Gasoline Prices (\$/gal)	Price Difference*
New England	\$3.96	\$2.12	\$1.84
Central Atlantic	\$3.82	\$2.01	\$1.81
Lower Atlantic	\$3.90	\$1.93	\$1.97
Midwest	\$3.36	\$1.83	\$1.53
Gulf Coast	\$4.16	\$1.66	\$2.50
Rocky Mountain	\$3.95	\$1.84	\$2.11
West Coast	\$4.03	\$2.60	\$1.43
<b>NATIONAL AVERAGE</b>	<b>\$3.90</b>	<b>\$1.98</b>	<b>\$1.92</b>

\*Negative numbers represent average propane prices that are lower than gasoline, on a \$/GGE basis.

TABLE 16c BIODIESEL (B20) AND DIESEL AVERAGE RETAIL PRICES BY REGION (DGE)			
Region	B20 Prices (\$/DGE)	Diesel Prices (\$/gal)	Price Difference*
New England	\$2.54	\$2.50	\$0.04
Central Atlantic	\$2.38	\$2.27	\$0.11
Lower Atlantic	\$2.33	\$2.19	\$0.14
Midwest	\$2.35	\$2.05	\$0.30
Gulf Coast	\$2.14	\$2.01	\$0.13
Rocky Mountain	\$2.25	\$2.05	\$0.20
West Coast	\$2.79	\$2.55	\$0.24
<b>NATIONAL AVERAGE</b>	<b>\$2.46</b>	<b>\$2.23</b>	<b>\$0.23</b>

\*Negative numbers represent average B20 prices that are lower than gasoline, on a \$/DGE basis.

TABLE 16d BIODIESEL (B99/B100) AND DIESEL AVERAGE RETAIL PRICES BY REGION (DGE)			
Region	B99/B100 Prices (\$/DGE)	Diesel Prices (\$/gal)	Price Difference*
New England	\$2.58	\$2.50	\$0.09
Central Atlantic	\$4.73	\$2.27	\$2.46
Lower Atlantic	\$3.43	\$2.19	\$1.24
Midwest	---	\$2.05	---
Gulf Coast	\$2.51	\$2.01	\$0.50
Rocky Mountain	\$2.64	\$2.05	\$0.59
West Coast	\$3.73	\$2.55	\$1.18
<b>NATIONAL AVERAGE</b>	<b>\$3.53</b>	<b>\$2.23</b>	<b>\$1.30</b>

\*Negative numbers represent average B99/B100 prices that are lower than gasoline, on a \$/DGE basis.

## Acknowledgements

The authors would like to acknowledge all of the contributors from the Clean Cities community who have provided prices for this report; we sincerely appreciate your continued dedication to the success of this report. The authors would also like to acknowledge the continued support of DOE for developing this report.

## Would You Like To Participate?

If you would like to provide prices for alternative fuels in your region and be part of the data collection effort for this report, or if you have any questions, please contact:
